Autism Solutions

“Demonstrating the latest therapeutic interventions for a growing crisis” with Dr Dietrich Klinghardt MD PhD together with the UK’s leading experts.

A must for health care professionals, carers and affected parents in London

Causes
Lack of appropriate preconception health care
Transfer of environmental toxins, metals and microbes trans-placentally.
Effects of microwave radiation on the foetus and newborn children from various sources: cordless phones, Wi-Fi, baby monitors, smart meters and computers.
Mercury and aluminium toxicity organophosphates, glyphosate, PBDEs, phthalates and other chemicals.
Borrelia species, viruses, mycoplasma.
Systemic family issues

Treatment Options
Balancing the gut microbiome (diet, enzymes, pre and probiotics, faecal transplant)
Gc protein macrophage activating factor
Biomedical approach (micronutrients, hormones, neurotransmitters)
Movement therapies and neurodevelopmental techniques
Masking, hyperbaric oxygen therapy.
Applied physics (energy medicine): trans-cranial low level laser and microwave, magnetic fields, pulsed micro-current, laser field restructuring etc.
Family constellation work, applied neurobiology

Following 5-year absence from the UK, the Klinghardt Institute proudly presents a 2-day congress with Dr Dietrich Klinghardt, supported by Prof Basant Puri, Dr Daniel Goyal and other leading experts.

Trend analysis and available statistics predict that by 2025, 50% of children born will struggle with autism and other neurodevelopmental disorders (Seneff S, PhD)

Man’s impact on the environment is driving this catastrophic development which could bring society as we know it to a rapid end. Affected children when fully developed will not be able to achieve their human and intellectual potential.

Families are struggling to cope with the daily challenges their children on the autistic spectrum present. Often feeling abandoned by their own family members, their health care providers and their government, there are however solutions that can and will make the needed difference.

In this workshop, our faculty will present the current understanding of the true underlying causes of the illness, simple diagnostic tests and affordable solutions from the biomedical field and other areas of applied science. We also hope that this meeting can serve as one of the voices serving as a wake-up call to our elected governmental policy makers.

Venue & Booking
October 17th and 18th 2015
Location: The Rooms at Browns (upstairs), 82-84 St Martin’s Lane, Covent Garden, London. WC2N 4AG.

Guest Speakers: Professor Basant Puri, Prof. Dr Vera Stejskal, Dr Daniel Goyal, Linda Scotson PhD, Dr Vera Stejskal.
Dr Dietrich Klinghardt MD, PhD has a thriving practice near Seattle, WA and specialises in chronic illness. He has been treating autistic children for over 25 years and is considered a pioneer in this area by many specialists.

Costs for the Weekend
£160 Health care professionals
£130 Charities and students
£80 Carers and families (option for Saturday or Sunday only at £40)
