Regular ART courses are run for advanced level practitioners, those who have previously completed the Summer Healing Retreat with Dr Klinghardt, or for newcomers who wish to experience and learn the technique from it's creator and world's foremost expert.

ART is a biofeedback-enhanced physical exam that uses changes in muscle tone as the primary indicator.

Developed by Dietrich Klinghardt, MD, PhD, ART is a comprehensive diagnostic system targeted at assessing the state of health of the autonomic nervous system and the coherence of the biophoton field. It focuses on identifying and addressing the 7 most common factors that block/stress healthy functioning of the system.

Workshops may include:

- ART fundamentals: provides key theory and practical training for existing and new practitioners. The aim of the two days is to leave all participants comfortable with ART to the point where they will be competent to use the technique within their practice and proceed to the next level of Training.

- ART advanced techniques, e.g. detecting and treating supplement or remedy uptake problems. These workshops include practice and consolidation of the method for practitioners who have mastered the hands-on part of ART.

Courses provide a certificate of attendance with CPD hours for the participants.

This is an ideal opportunity for you to **enhance your diagnostic skills with this highly effective and evidence-based technique**. Recent peer-reviewed publication: Frandsen, A., McClure, M., Chung, M. K., & LaRicca, P. J. (2018). Autonomic Response Testing Compared With Immunoglobulin E Allergy Panel Test Results: Preliminary Report. *Alternative therapies in health and medicine*. 2018 - ncbi.nlm.nih.gov
